Etter 130 års fravær er havørn endelig tilbake i ytre Oslofjord!

Havørn hekker på denne øya, og trenger ro fra 1. mars til 1. september. Vennligst unngå ferdsel i avmerket hensynsområde jf. naturmangfoldlovens §6

Takk for hjelpen!

The white-tailed eagle (sea eagle) has returned to the Oslofjord after 130 years. A pair of white-tailed eagles breeds on this island. Please help us protect them. Eagles are particularly vulnerable during the breeding season. Please avoid the marked area from March 1 until September 1. Eagles and their habitats are protected under the Norwegian biodiversity legislation.

Thank you for taking care of nature.
